

## 2018 Crop Year Fertilizer Sales Report

### MINNESOTA DEPARTMENT OF AGRICULTURE

#### Executive Summary

The Minnesota Department of Agriculture (MDA) is the lead state agency for pesticide and fertilizer regulatory functions in Minnesota. Before 2010, agricultural fertilizer sales were collected from distributors in the fall and the spring of each year. For each of those reporting periods a fertilizer report was completed. The fall report consisted of fertilizer sales from July 1 to December 31. The spring report consisted of fertilizer sales from January 1 to June 30. A growing season would consist of two reports from July 1 to June 30. Beginning in 2010 each registrant under section (18C.411) and each company licensed under section (18C.415) must file an annual tonnage report for the previous year ending June 30 with the Minnesota Department of Agriculture (MDA) on forms provided or approved by the MDA. Beginning after the 2010 crop season an annual report is completed based on the fertilizer that is reported. This report contains reported sales from the 2018 crop year that included all sales from July 1, 2017 to June 30, 2018. The reported table format is provided by The Fertilizer Institute<sup>1</sup>.

The MDA collects tonnage<sup>2</sup> information on agricultural and non-agricultural fertilizers. The agricultural fertilizer sales are reported by tons of fertilizer product and the grade in a county by a licensed dealer. The non-agricultural fertilizers are reported by tons, but do not include the nutrient grade or county in which it was sold and are reported by the registrant. The nutrient analysis reported by fertilizer dealerships is for nitrogen (N), phosphorus (P), and potash (potassium) (K). It is important to note that phosphorus is reported as P<sub>2</sub>O<sub>5</sub> and potash is reported as K<sub>2</sub>O in the analysis. This report is based on agricultural pesticide sales.

Sales and distribution of fertilizers in Minnesota do not necessarily reflect the amount of nutrients applied to crop land in any individual county. A farmer may have many fields that could span across county lines. Additionally, the farmer may purchase fertilizer in the 2018 crop year and apply that fertilizer for the 2019 crop.

Fertilizer sales from 2011 to 2017 have been consistently around three million tons per year. Fertilizer tonnage sales increased by about ten percent to a record amount of approximately 3.25 million tons for the crop year of 2018. Dealerships are reporting increases of fertilizer products with

---

<sup>1</sup> Reports similar to this one from other states can be purchased from The Fertilizer Institute.

<sup>2</sup> Dealers report sales by pounds or gallons of product and those sales are converted to tons of product or tons of nutrients.

- In accordance with the Americans with Disabilities Act, this information is available in alternative forms of communication upon request by calling 651-201-6000. TTY users can call the Minnesota Relay Service at 711. The MDA is an equal opportunity employer and provider. 12/2021

lower amounts of nitrogen. This would include custom mixing of fertilizer products by the dealerships to meet the farmers nutrient needs.

Anhydrous ammonia continued to decrease in reported sales. This is reflected in a larger trend of farmers shifting away from anhydrous ammonia and applying other sources of nitrogen, such as urea or other nitrogen products provided by the dealerships. Nitrogen products like ammonium nitrate have not been sold in Minnesota since the 2014 crop year. Dealers reported products containing sulfur have been increasing in sales. Ammonium sulfate sales have more than doubled since 2010.

Highlights of 2018 fertilizer sales include:

- Second highest amount of N was sold at 808,330 tons
- Second highest amount of  $P_2O_5$  was sold at 360,396 tons
- A record amount of  $K_2O$  was sold at 375,340 tons
- Urea is the most popular product containing nitrogen with 850,139 tons reported
- A total of 267,420 tons of DAP and 262,235 tons of MAP were reported
- 12-40-0, a phosphorus product containing sulfur, is now the 3rd most sold phosphorus product with 116,219 tons in annual sales
- Farmers are using more fertilizer products with lower nitrogen content

Fertilizer sales trends have shown a consistent increase year over year. The largest increase in fertilizer products has been for products that contain sulfur. However, this report does not include any analysis of actual sulfur sold in Minnesota.

## Introduction

This report summarizes the tonnage of fertilizer reported from licensed dealers as distributed OR sold in Minnesota<sup>3</sup> between July 1, 2017 and June 30, 2018 (the 2018 crop year).

Fertilizer tonnages are reported for agricultural or non-agricultural use:

- Agricultural fertilizer tonnages are reported as the amount and grade of fertilizer material sold to end users broken down by county where the fertilizer was applied. The tonnages are reported by fertilizer dealers or distributors.
- Non-agricultural fertilizer tonnages, such as lawn and garden fertilizers, are reported by the companies who produce or blend the product. These tonnages are reported statewide (not by county) and are not listed by analysis or type of fertilizer. Thus, the nutrient contributions from those fertilizers or distribution by county are not known.

Each registrant under Minnesota statute section 18C.411 and each company licensed under Minnesota statute section 18C.415 must file an annual tonnage report for the previous year ending June 30 with the Minnesota Department of Agriculture (MDA). Forms provided by or approved by the MDA, stating the number of net tons of each brand or grade of fertilizer distributed in Minnesota or the number of net tons and grade of each raw fertilizer material sold or distributed in Minnesota during the reporting period are used for reporting (Minnesota Statute 18C.421).

## Units

- Tonnages are reported as short tons with one ton equaling 2,000 pounds.
- Nitrogen (N) is reported in units of N throughout the report.
- Phosphorus (P) is reported as  $P_2O_5$  equivalent throughout this report. Conversion to elemental P can be accomplished as  $P_2O_5 \times 0.437 = P$ .
- Potash (potassium) (K) is reported as  $K_2O$  equivalent throughout this report. Conversion to elemental K can be accomplished as  $K_2O \times 0.830 = K$ .
- Currently fertilizer sales are reported as liquid or solid, which is reported as bulk. Bag is no longer used for reporting fertilizer sales, but it still is listed in the output and thus in the reports. All fertilizer sold in bag is reported as bulk.

## Data interpretation

Prior to using the information contained in this report, please note the following:

- Prior to 2010, fertilizer sales were gathered from fertilizer distributors for a fall report and a spring report. The fall report consisted of sales from July 1 to December 31. The spring sales consisted of sales from January 1 to June 30. Readers are cautioned that the reported tonnages prior to 2010 is likely to underrepresent actual sales and may include substantial uncertainty. From 2010 to present, fertilizer sales are reported by dealers on a yearly basis from July 1 to June 30. This report consists of sales from July 1, 2017 to June 30, 2018, or the 2018 crop year.

---

<sup>3</sup> Fertilizer can be reported as distributed or sold. Fertilizer can be purchased in one county and applied in another county. Therefore, it is not sold, but distributed in that county.

- This report does not capture all fertilizer applied for the 2018 crop year. As an example, some Minnesota corn farmers apply nitrogen on corn fields for the 2018 crop after July 1. The sales after July 1 would be recorded in the 2018 fertilizer sales report. Similarly, some fertilizer sales reported may have been applied in the 2017 crop year.
- Fertilizer sold during a given year does not necessarily mean that the materials were “used” or land applied during that time period. On-farm storage continues to increase each year. This allows producers to purchase and store fertilizer products for future use when fertilizer products are readily available and/or at reasonable prices.

Readers are also cautioned that sales information may not accurately reflect fertilizer use in a specific county. The accuracy of the county sales information is influenced by the location of the dealership and the location of the purchaser. If the farm is near a county boundary or straddles county lines, the seller may be reporting sales data based on farm location or even the dealership location. Some farming operations have fields scattered across multiple counties but the dealership may not know all the details necessary to accurately report on a county level. Example: In this report, Lincoln County reported annual sales of 23,683 tons of fertilizer sold and 207,000 acres of cropland harvested in 2018. Neighboring Pipestone County reported almost double the number of annual sales of fertilizer, 43,958 tons sold, despite having a similar amount of harvested crop acres, 198,740 acres<sup>4</sup>. This large discrepancy is likely due to county sales not reported for the correct county. Clustering the sales data from neighboring counties helps remove some of this geographical bias. Regionally, this data becomes more accurate and the statewide sales data is considered very accurate.

Selected sale and distribution data and trends are graphed in the following charts.

---

<sup>4</sup> 2018 Census of Agriculture, USDA NASS

Reported annual fertilizer sales by tonnage of total material have increased from two million tons to three million tons from 1989 to 2010, Figure 1. From 2011 to 2017, annual fertilizer tonnage reported has consistently been about 3 million tons. Fertilizer tonnage sales increased to about 3.3 million in 2018. Figure 1 includes both agricultural and non-agricultural fertilizer sales.

Figure 1. Tons of fertilizer material reported sold in Minnesota by year from 1989 to 2018.

Fertilizer sales of actual nitrogen (units) has increased by approximately 20 percent from 1989 to 2010. After 2010, nitrogen fertilizer sales have been fairly constant at approximately 775,000 ton per year with an increase to about 810,000 ton per year for 2018, Figure 2.

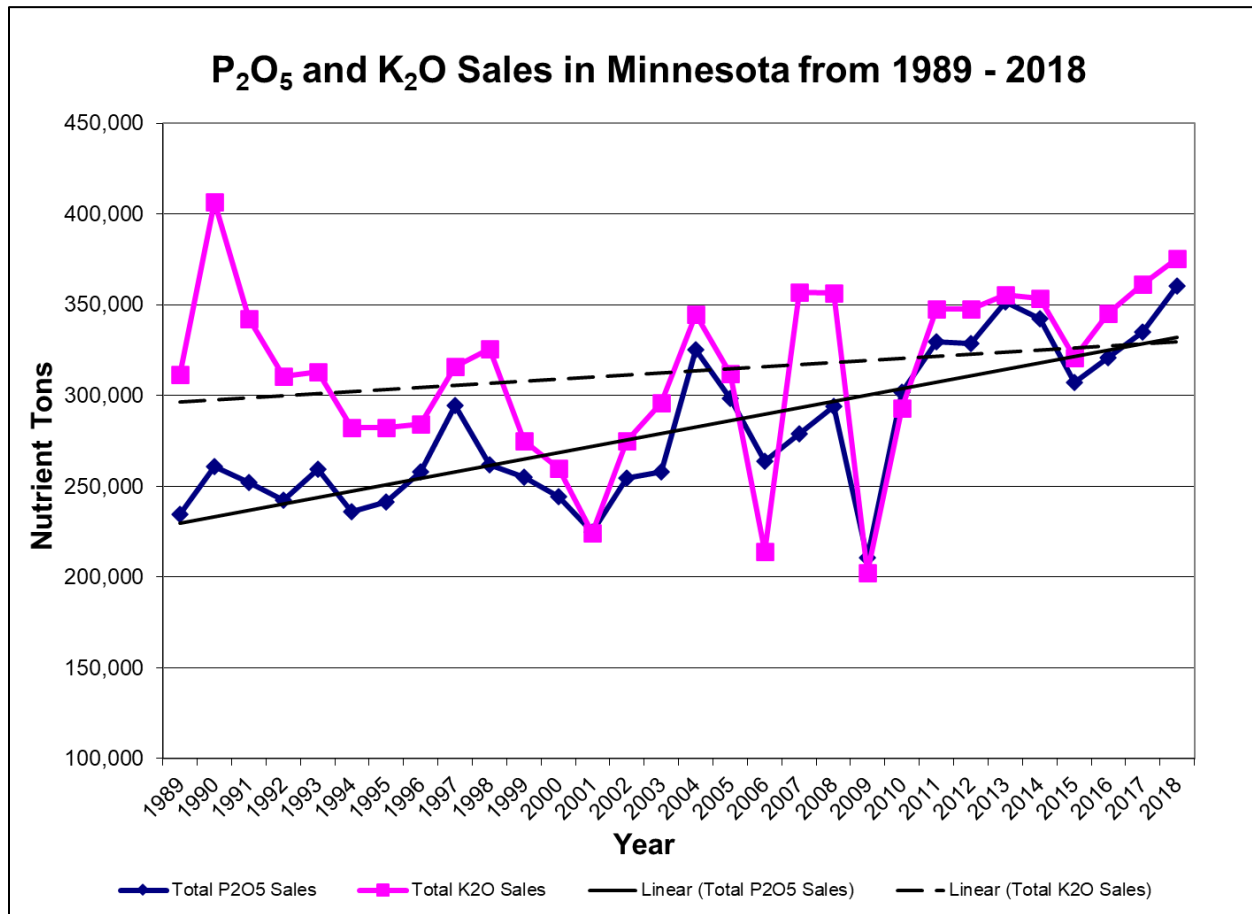

Figure 2. Actual nitrogen sold in tons by year from 1989 to 2018.

Fertilizer sales of available (units) for  $P_2O_5$  have increased by approximately 25 percent from 1989 to 2010 before leveling off at approximately 350,000 tons. Soluble  $K_2O$  sales have increased with some increased variability by an average of twenty percent since 1989, Figure 3.

**Figure 3. Actual  $P_2O_5$  and  $K_2O$  reported sold in tons by year from 1989 to 2018.**

Annual sales of  $P_2O_5$  and  $K_2O$  have been stable and consistent since dealers began reporting sales in 2010 with a gradual increase in annual sales from 2010 to 2018.

Anhydrous ammonia sales as a nitrogen fertilizer source have been decreasing and other sources of nitrogen have been increasing in sales. Sales of different nitrogen fertilizers varies from year to year as shown in Figure 4.

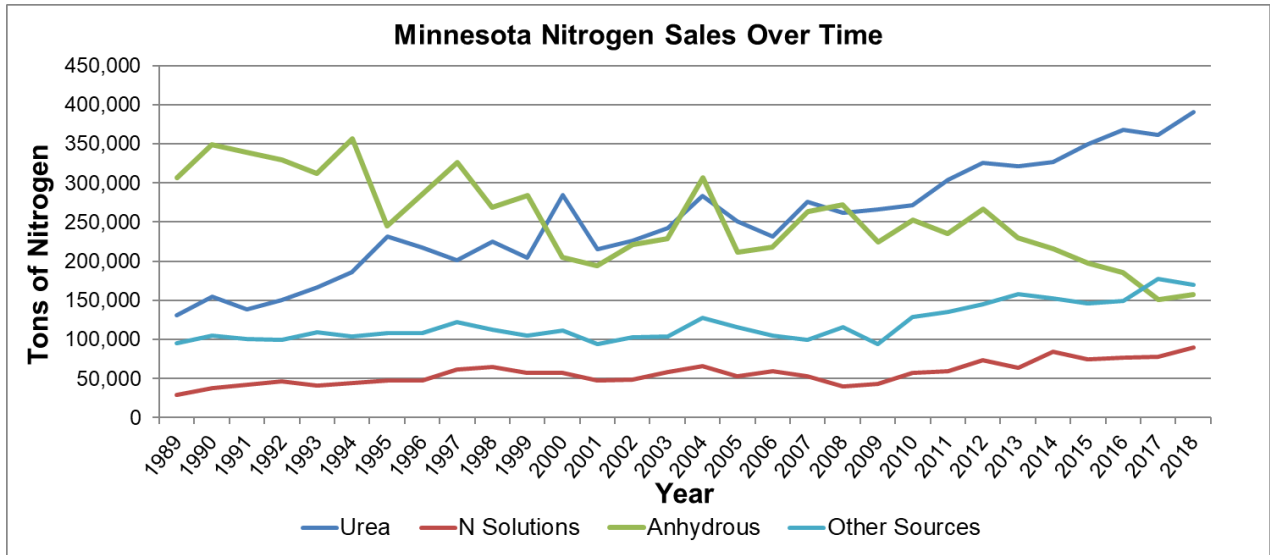

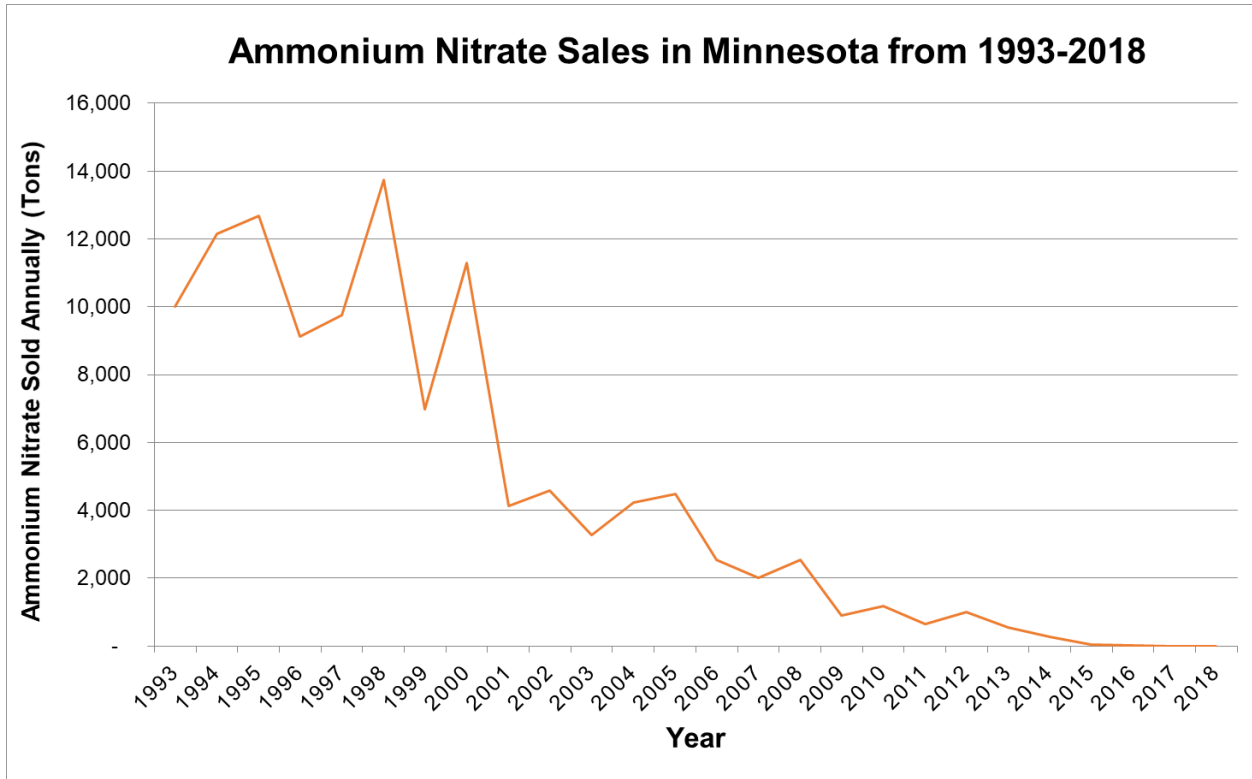

Figure 4. Distribution of nitrogen sales by year for different nitrogen sources.

There were no agricultural sales of ammonium nitrate reported for 2015, 2016, 2017 or 2018. Sales of ammonium nitrate have been trending downwards since the mid-1990's, Figure 5.

**Figure 5. Ammonium Nitrate sales expressed as total tons of product sold from 1994-2018 in Minnesota.**

Sales of fertilizer containing sulfur have increased from 1994 to 2018. Ammonium sulfate (21-0-0-24) sales have more than doubled since 2010. The sale of 12-40-0-10 and 13-33-0-15, private label brands, have also tripled since 2010. Meanwhile thiosulfate (12-0-0-26), potassium sulfate (0-0-50-17) and potassium manganese sulfate (0-0-22-21) have remained relatively stable. Elemental sulfur and fertilizers without N-P-K that contained sulfur were not included in the following figure. The MDA only records fertilizer analysis of products for N-P-K. Therefore, sulfur is known only products that include N-P-K in the analysis, such as those products below.

**Figure 6. Major fertilizers containing sulfur expressed as total tons of product by year from 1993-2018.**

The fertilizer products containing phosphorus have increased overall to a record amount of P<sub>2</sub>O<sub>5</sub> being sold in Minnesota for the 2018 crop year.

Figure 7. Sources of P<sub>2</sub>O<sub>5</sub> by year 1989 - 2018.
