

Emerald Ash Borer

Emerald ash borer (EAB) is an invasive wood-boring beetle. The larvae attack and kill ash trees by tunneling beneath the bark. This cuts off the tree's nutrient supply, leading to tree death.

Visit www.mda.state.mn.us/eab for more information and resources.

If you suspect EAB:

1. Take pictures of the insect or damage.
2. Note the exact location, including the address or GPS coordinates.
3. Contact the Minnesota Department of Agriculture:
