RGB TINTS AND SHADES

1/31/2020

Below are a few samples of MDA communications and outreach materials that incorporate brand primary, accent, and neutral colors, along with some tints and shades.

For consistency and to maintain brand identity, designated Minnesota state brand primary, accent, and neutral colors are to be used in all Minnesota Department of Agriculture (MDA) communications and outreach materials.

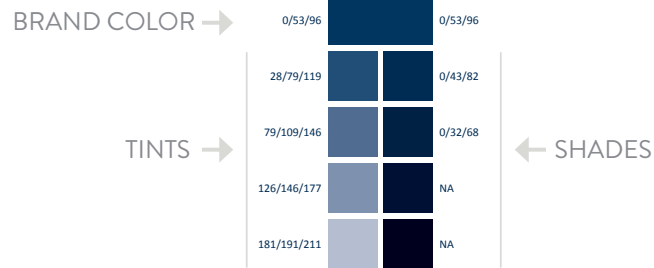

This guide provides further color options within the state color palette with tints and shades of each brand color. A tint is a mixture of a color with white, which increases lightness. A shade is the mixture of a color with black, which increases the darkness.

Tints and shades can be useful in creating maps, charts, graphs, infographics, or publications requiring a wide range of colors. Most web and Microsoft programs are based on RGB (Red/Green/Blue) color values, so included in this guide are the RGB shade and tint values or numbers of state colors.

The shapes in each color section are:

- Top – Brand colors
- Left – Tints of brand colors
- Right – Shades of brand colors

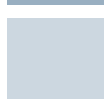

And here is an example:

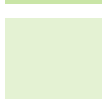

PRIMARY COLORS

The Minnesota Blue and Minnesota Green are the core of state brand identity, and should appear prominently on all communication pieces.
