### Executive Summary

The Minnesota Department of Agriculture (MDA) is the lead state agency for pesticide and fertilizer regulatory functions in Minnesota. Prior to 2010, agricultural fertilizer sales were collected from distributors in the fall and the spring of each year. For each of those reporting periods a fertilizer report was completed. The fall report consisted of fertilizer sales from July 1 to December 31. The spring report consisted of fertilizer sales from January 1 to June 30. A growing season would consist of two reports from July 1 to June 30. Beginning in 2010, each registrant under section (18C.411) and each company licensed under section (18C.415) was required to file an annual tonnage report for the previous year ending June 30 with the Minnesota Department of Agriculture (MDA) on forms provided or approved by the MDA. After the 2010 crop season, an annual report is completed based on the fertilizer that is reported. This current report contains reported sales from the 2019 crop year which included all sales from July 1, 2018 to June 30, 2019. The reported table format is provided by The Fertilizer Institute<sup>1</sup>.

The MDA collects tonnage<sup>2</sup> information on agricultural and non-agricultural fertilizers. The agricultural fertilizer sales are reported by tons of fertilizer product and the grade in a county by a licensed dealer. The non-agricultural fertilizers are reported by tons, but do not include the nutrient grade or county in which they were sold and are reported by the registrant. The nutrient analysis reported by fertilizer dealerships is for nitrogen (N), phosphorus (P), and potash (potassium) (K). It is important to note that phosphorus is reported as P<sub>2</sub>O<sub>5</sub> and potash is reported as K<sub>2</sub>O in the analysis. This report is based on agricultural pesticide sales.

Sales and distribution of fertilizers in Minnesota do not necessarily reflect the amount of nutrients applied to crop land in any individual county. A farmer may have multiple fields that could span across

---

<sup>1</sup> Reports similar to this one from other states can be purchased from The Fertilizer Institute.

<sup>2</sup> Dealers report sales by pounds or gallons of product and those sales are converted to tons of product or tons of nutrients.

county lines. Additionally, the farmer may purchase fertilizer in the 2019 crop year and apply that fertilizer for the 2020 crop.

Fertilizer sales from 2011 to 2018 have been consistently around three million tons per year. Fertilizer tonnage sales remained steady at approximately 3.01 million tons for the crop year of 2019.

Dealerships are reporting increases of fertilizer products with lower amounts of nitrogen. This includes custom mixing of fertilizer products by the dealerships to meet the farmers nutrient needs.

Anhydrous ammonia continued to decrease in reported sales. This is reflected in a larger trend of farmers shifting away from anhydrous ammonia and applying other sources of nitrogen, such as urea or other nitrogen products provided by dealerships. Nitrogen products like ammonium nitrate have not been sold in Minnesota since the 2014 crop year. Dealers reported products containing sulfur have increased in sales. Ammonium sulfate sales have more than doubled since 2010.

Highlights of 2019 fertilizer sales include:

- Tons of Actual N sold were 756,068 tons
- Tons of P<sub>2</sub>O<sub>5</sub> sold were 320,475 tons
- Tons of K<sub>2</sub>O sold were 336,030 tons
- Urea was the most popular product containing nitrogen with 785,389 tons reported
- A total of 202,522 tons of DAP and 243,514 tons of MAP were reported
- 12-40-0, a phosphorus product containing sulfur, is now the 3rd most popular phosphorus product sold with 106,668 tons in annual sales
- Farmers are using more fertilizer products with lower nitrogen content

Fertilizer sales trends have shown a general long-term increase year over year. The largest increase in fertilizer product sales have been for products containing sulfur. However, this report does not include an analysis of actual sulfur sold in Minnesota.

Dealers may report fertilizer sales in actual product, such as urea or anhydrous ammonia, or as a custom blend. In 2019 there was an increase in sales reported as custom blends. Custom blends are reported as Code 0, identified by Grade. Increases in the custom blends category will have an effect on products that are used to make custom blends. An example would be a custom blend that is made from urea and monoammonium phosphate. The custom blend would reduce the amount of those products reported because the tonnage would be reported by grade and not as urea or monoammonium phosphate. Some of the reduction in actual products for 2019 is due to those products which were used in custom blends and were reported as identified by grade.

## **Introduction**

This report summarizes the tonnage of fertilizer reported from licensed dealers as distributed OR sold in Minnesota<sup>3</sup> between July 1, 2018 and June 30, 2019 (the 2019 crop year).

Fertilizer tonnages are reported for agricultural or non-agricultural use:

- Agricultural fertilizer tonnages are reported as the amount and grade of fertilizer material sold to end users broken down by county where the fertilizer was applied. The tonnages are reported by fertilizer dealers or distributors.
- Non-agricultural fertilizer tonnages, such as lawn and garden fertilizers, are reported by the companies who produce or blend the product. These tonnages are reported statewide (not by county) and are not listed by analysis or type of fertilizer. Thus, the nutrient contributions from those fertilizers or distribution by county are not known.

Each registrant under Minnesota statute section 18C.411 and each company licensed under Minnesota statute section 18C.415 must file an annual tonnage report for the previous year ending June 30 with the Minnesota Department of Agriculture (MDA). Forms provided by or approved by the MDA, stating the number of net tons of each brand or grade of fertilizer distributed in Minnesota or the number of net tons and grade of each raw fertilizer material sold or distributed in Minnesota during the reporting period are used for reporting (Minnesota Statute 18C.421).

## **Units**

- Tonnages are reported as short tons with one ton equaling 2,000 pounds.
- Nitrogen (N) is reported in units of N throughout the report.
- Phosphorus (P) is reported as P<sub>2</sub>O<sub>5</sub> equivalent throughout this report. Conversion to elemental P can be accomplished as P<sub>2</sub>O<sub>5</sub> x 0.437 = P.
- Potash (potassium) (K) is reported as K<sub>2</sub>O equivalent throughout this report. Conversion to elemental K can be accomplished as K<sub>2</sub>O x 0.830 = K.
- Fertilizer sales are reported as liquid or solid, which is reported as bulk. Bag is no longer used for reporting fertilizer sales, but it still is listed in the output and thus in the reports. All fertilizer sold in bag is reported as bulk.

## **Data interpretation**

Prior to using the information contained in this report, please note the following:

- Prior to 2010, fertilizer sales were gathered from fertilizer distributors for a fall report and a spring report. The fall report consisted of sales from July 1 to December 31. The spring sales consisted of sales from January 1 to June 30. Readers are cautioned that the reported tonnages prior to 2010 is likely to underrepresent actual sales and may include substantial uncertainty. From 2010 to present, fertilizer sales are reported by dealers on a yearly basis from July 1 to June 30. This report consists of sales from July 1, 2018 to June 30, 2019, or the 2019 crop year.

---

<sup>3</sup> Fertilizer can be reported as distributed or sold. Fertilizer can be purchased in one county and applied in another county. Therefore, it is not sold, but distributed in that county.

- This report does not capture all fertilizer applied for the 2019 crop year. As an example, some Minnesota corn farmers apply nitrogen on corn fields for the 2019 crop after July 1. The sales after July 1 would be recorded in the 2019 fertilizer sales report. Similarly, some fertilizer sales reported may have been applied in the 2018 crop year.
- Fertilizer sold during a given year does not necessarily mean that the materials were “used” or land applied during that time period. On-farm storage continues to increase each year. This allows producers to purchase and store fertilizer products for future use when fertilizer products are readily available and/or at reasonable prices.

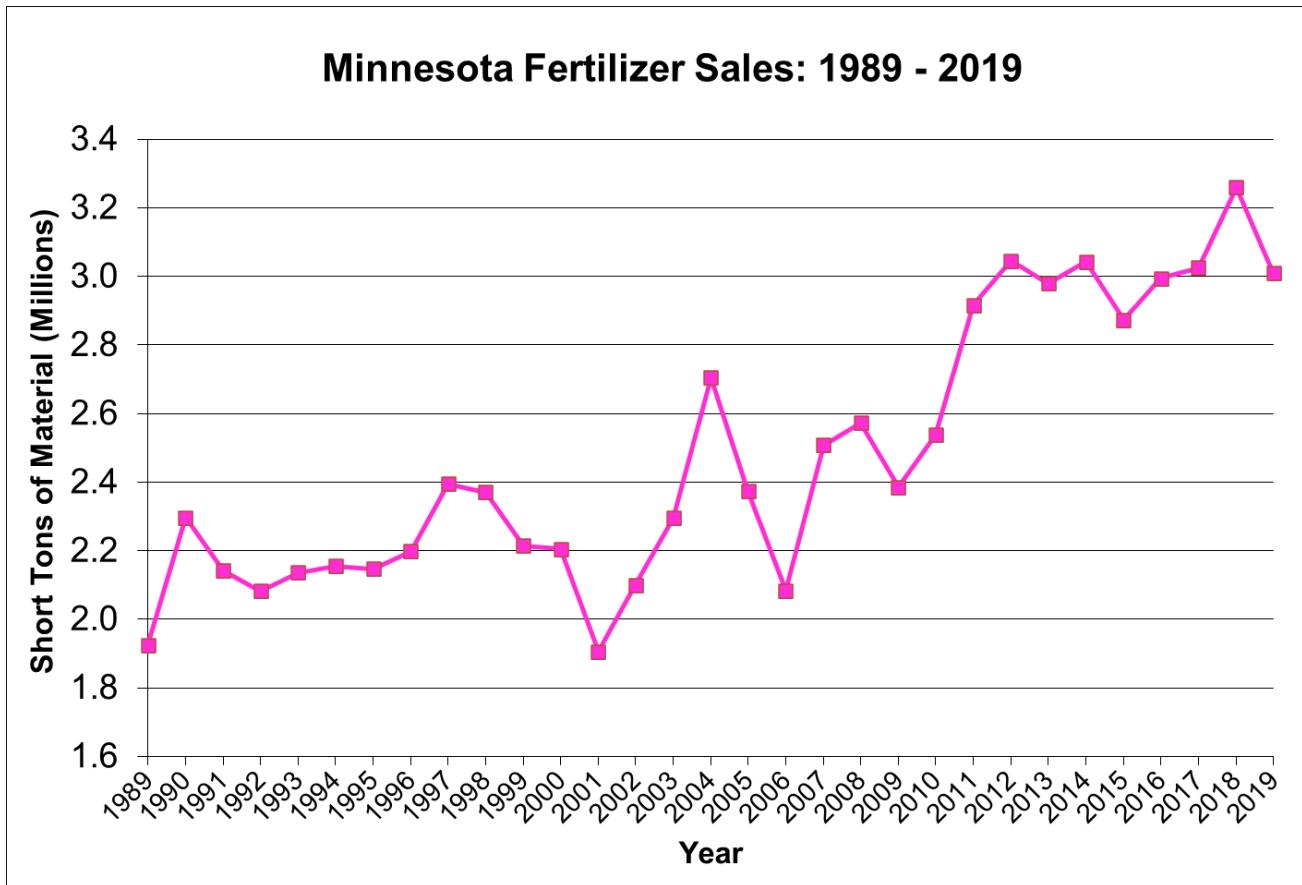

Readers are also cautioned that sales information may not accurately reflect fertilizer use in a specific county. The accuracy of the county sales information is influenced by the location of the dealership and the location of the purchaser. If the farm is near a county boundary or straddles county lines, the seller may be reporting sales data based on farm location or even the dealership location. Some farming operations have fields scattered across multiple counties but the dealership may not know all the details necessary to accurately report on a county level. For example, in this report, Wabasha County reported annual sales of 16,809 tons of fertilizer sold and 175,836 acres of cropland<sup>4</sup>. Neighboring Winona County reported more than double in annual sales of fertilizer, 41,272 tons sold, despite having a similar amount of cropland, 180,799. This large discrepancy is likely due to county sales not representing the county where the fertilizer was applied. Clustering the sales data from neighboring counties helps remove some of this geographical bias. Regionally, this data becomes more accurate and the statewide sales data is considered very accurate.

Selected sale and distribution data and trends are graphed in the following charts.

---

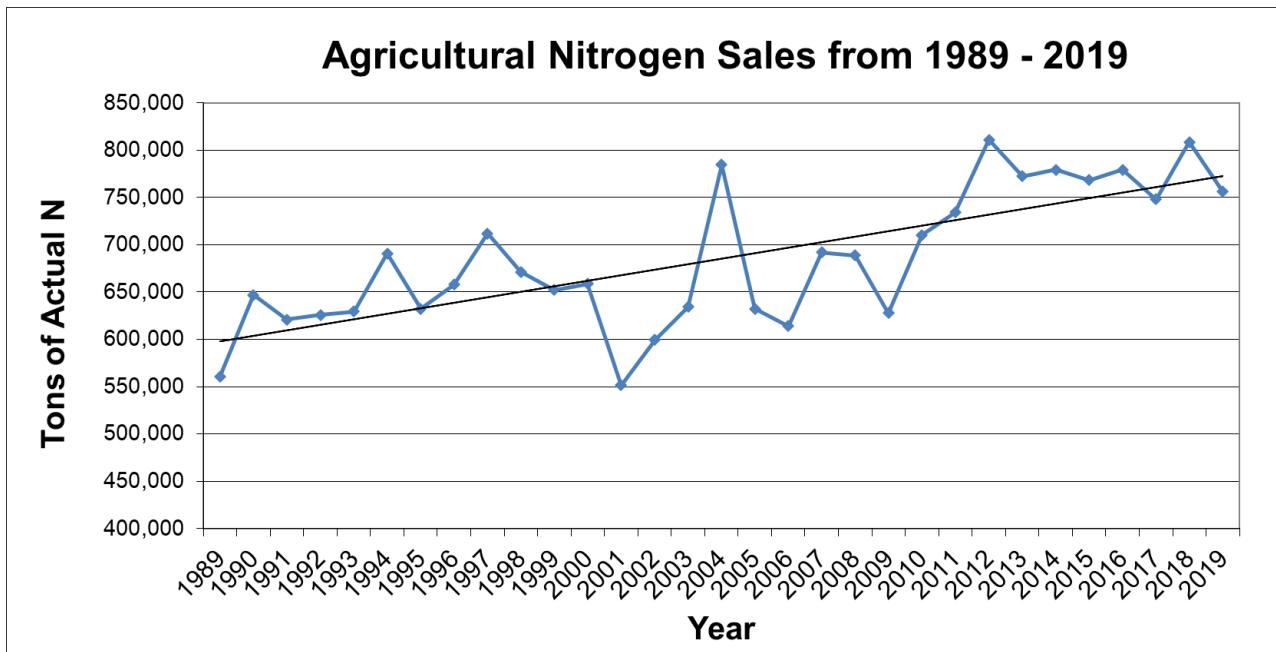

<sup>4</sup> The most recent data for cropland acres by county is from the 2017 Census of Agriculture, USDA NASS

Reported annual fertilizer sales by tonnage of total material have increased from two million tons to three million tons from 1989 to 2010(Figure 1). From 2011 to 2019, annual fertilizer tonnage reported has consistently been about 3 million tons. Fertilizer tonnage sales remained steady at about 3.01 million in 2019. Figure 1 includes both agricultural and non-agricultural fertilizer sales.

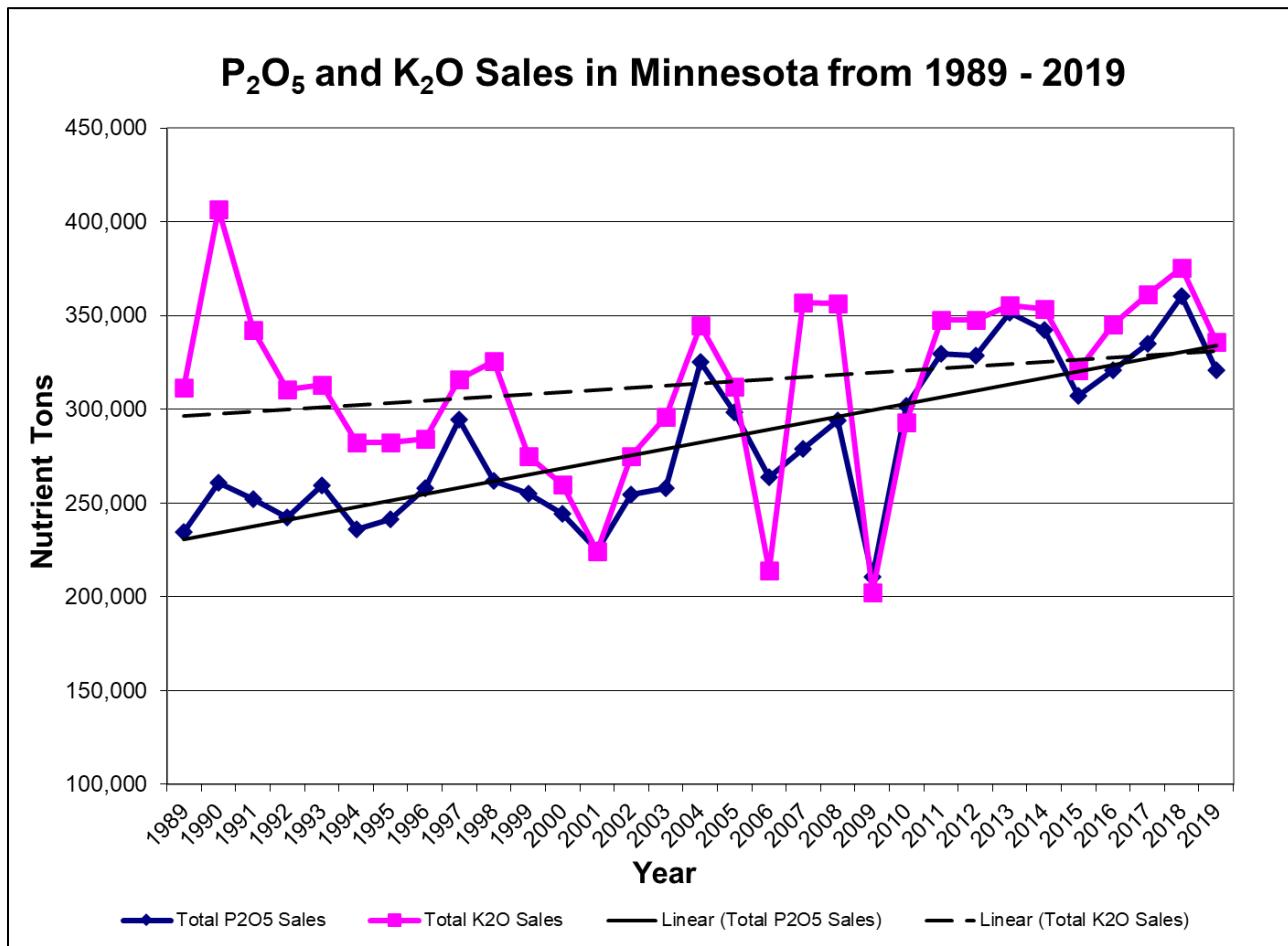

**Figure 1. Tons of fertilizer material reported sold in Minnesota by year from 1989 to 2019.**

Fertilizer sales of actual nitrogen (units) has increased by approximately 20 percent from 1989 to 2010. After 2010, nitrogen fertilizer sales have been fairly constant at approximately 775,000 ton per year with a slight decrease to about 756,000 tons per year for 2019(Figure 2).

**Figure 2. Actual nitrogen sold in tons by year from 1989 to 2019.**

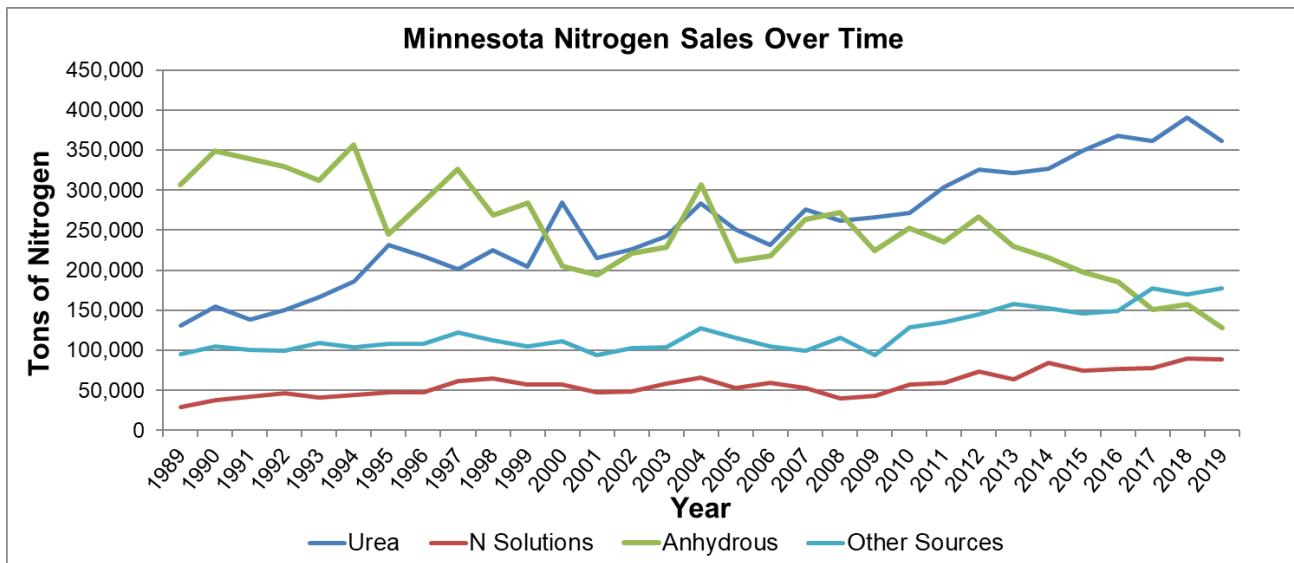

Fertilizer sales of available (units) for P<sub>2</sub>O<sub>5</sub> have increased by approximately 25 percent from 1989 to 2010 before leveling off at approximately 350,000 tons. Soluble K<sub>2</sub>O sales have increased with some increased variability by an average of twenty percent since 1989(figure 3).

**Figure 3. Actual P<sub>2</sub>O<sub>5</sub> and K<sub>2</sub>O reported sold in tons by year from 1989 to 2019.**

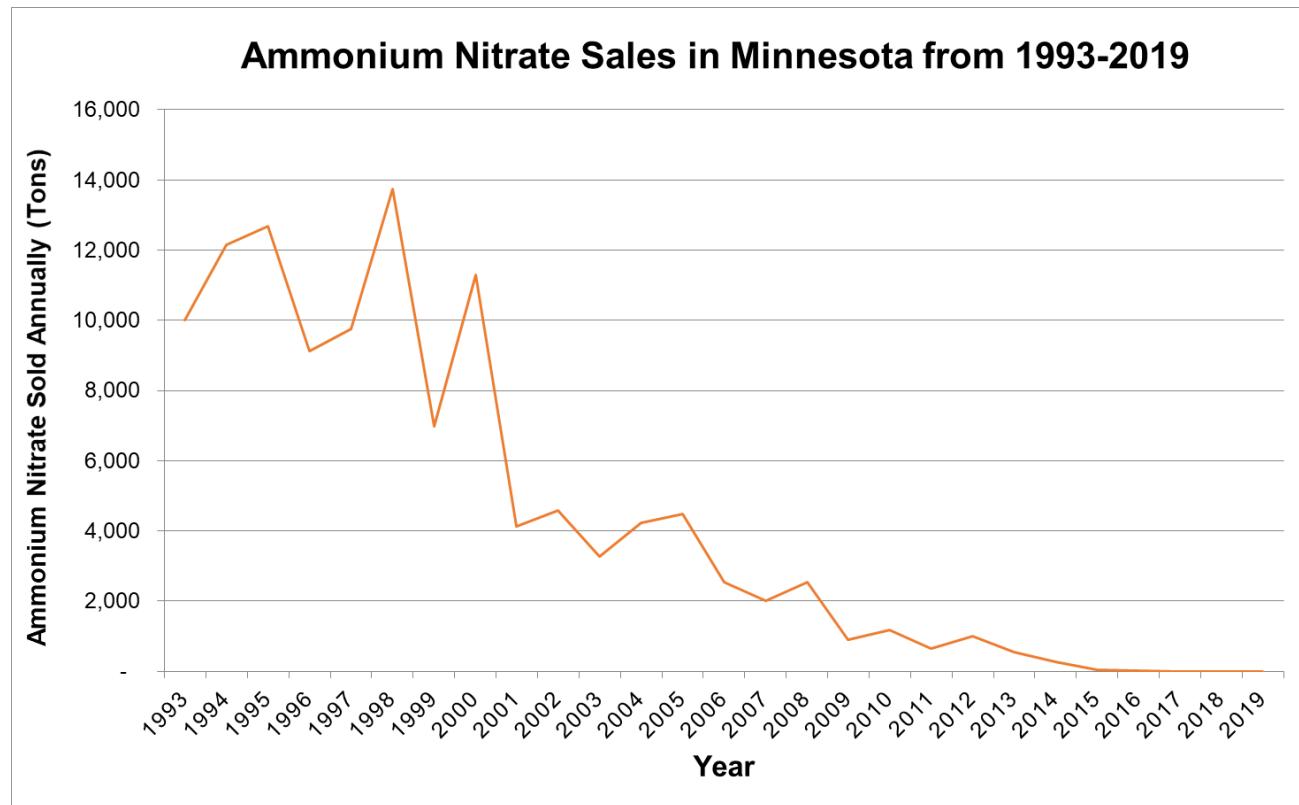

Annual sales of P<sub>2</sub>O<sub>5</sub> and K<sub>2</sub>O have been stable and consistent since dealers began reporting sales in 2010 with a gradual increase in annual sales from 2010 to 2018 and a slight decrease in sales in 2019.

Anhydrous ammonia sales as a nitrogen fertilizer source have been decreasing and other sources of nitrogen have been increasing in sales. Sales of different nitrogen fertilizers varies from year to year as shown in Figure 4.

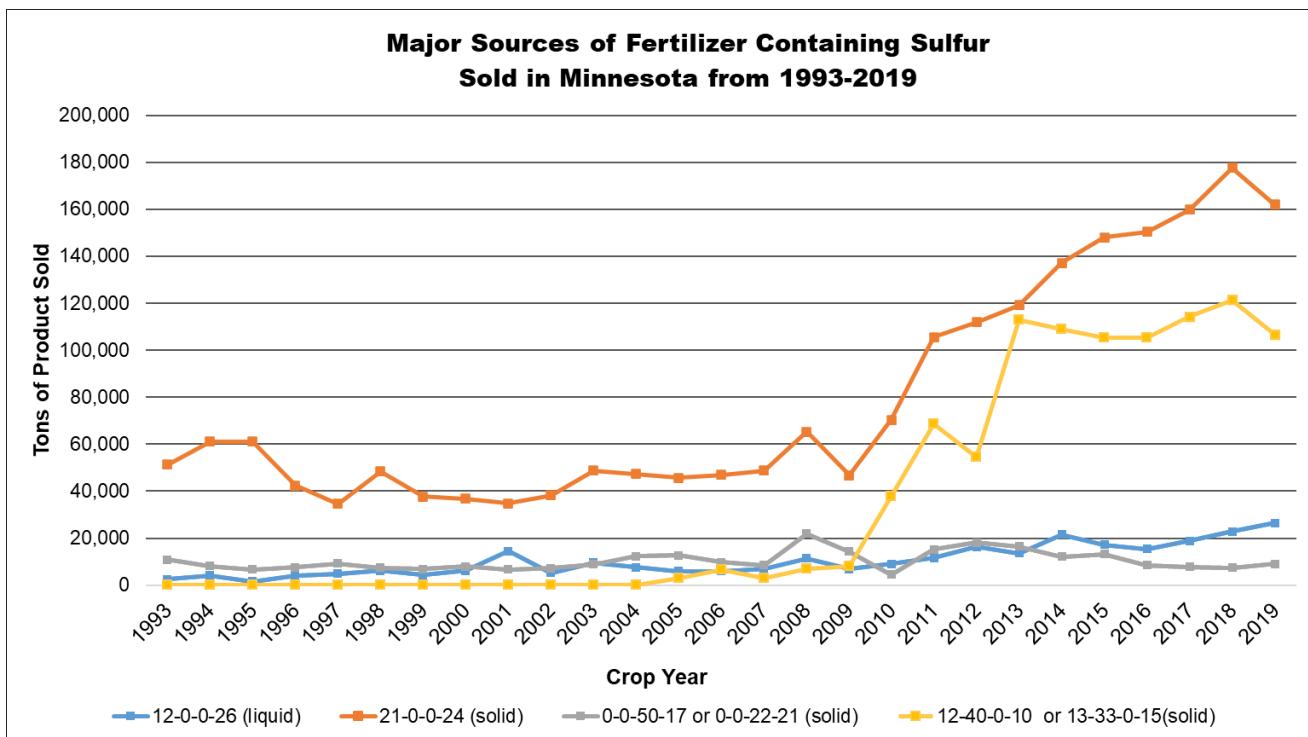

**Figure 4. Distribution of nitrogen sales by year for different nitrogen sources.**

There have been no agricultural sales of ammonium nitrate reported in Minnesota since 2014. Sales of ammonium nitrate have been trending downwards since the mid-1990's (Figure 5).

**Figure 5. Ammonium Nitrate sales expressed as total tons of product sold from 1994-2019 in Minnesota.**

Sales of fertilizer containing sulfur have increased from 1994 to 2019. Ammonium sulfate (21-0-0-24) sales have more than doubled since 2010. The sale of 12-40-0-10 and 13-33-0-15, private label brands, have also tripled since 2010. Meanwhile thiosulfate (12-0-0-26), potassium sulfate (0-0-50-17) and potassium manganese sulfate (0-0-22-21) have remained relatively stable. Elemental sulfur and fertilizers without N-P-K that contained sulfur were not included in the following figure. The MDA only records fertilizer analysis of products for N-P-K. Therefore, sulfur is known only products that include N-P-K in the analysis, such as those products below.

**Figure 6. Major fertilizers containing sulfur expressed as total tons of product by year from 1993-2019.**

The fertilizer products containing phosphorus have increased overall to a record amount of P<sub>2</sub>O<sub>5</sub> being sold in Minnesota for the 2018 crop year, followed by a slight decrease in 2019.

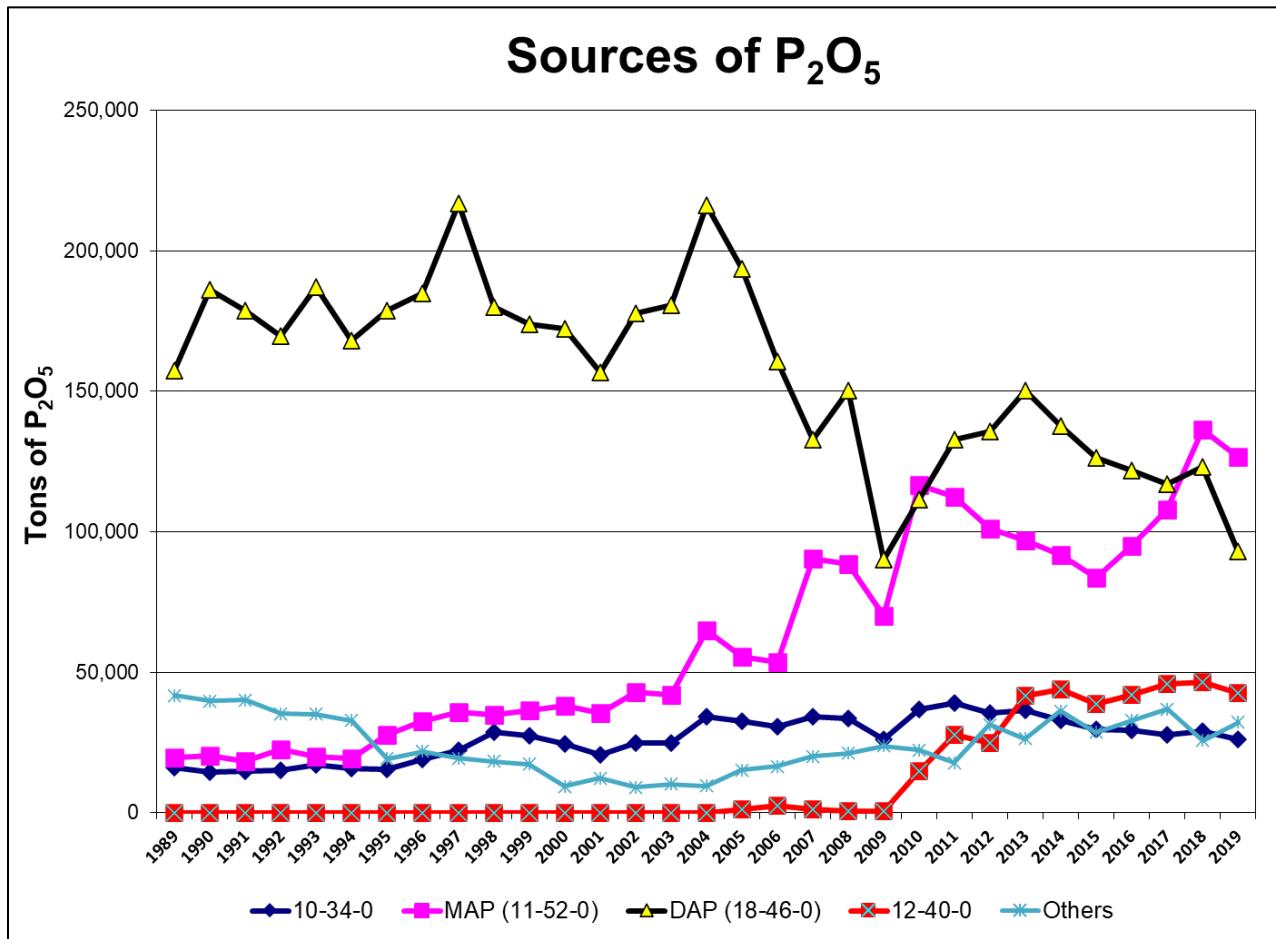

Figure 7. Sources of P<sub>2</sub>O<sub>5</sub> by year 1989 - 2019.

The Minnesota Department of Agriculture would like to thank all the  
fertilizer dealers across Minnesota for their cooperation  
in providing detailed annual fertilizer tonnage reports.
