Minnesota Department of Agriculture. (2024). *2023 Crop Year Fertilizer Sales Report*.
<https://www.mda.state.mn.us/pesticide-fertilizer/fertilizer-use-sales-data>

Executive Summary

The Minnesota Department of Agriculture (MDA) is the lead state agency for pesticide and fertilizer regulatory functions in Minnesota. Prior to 2010, agricultural fertilizer sales were collected from distributors in the fall and the spring of each year. For each of those reporting periods a fertilizer report was completed. The fall report consisted of fertilizer sales from July 1 to December 31. The spring report consisted of fertilizer sales from January 1 to June 30. A growing season would consist of two reports from July 1 to June 30. Beginning in 2010, each registrant under Minnesota law, section 'Registration of Specialty Fertilizers, Soil Amendments, and Plant Amendments' ([18C.411](#)) and each company licensed under section 'Tonnage Report' ([18C.421](#)) and 'Fertilizer Licenses' ([18C.415](#)) was required to file an annual tonnage report for the previous year ending June 30 with the Minnesota Department of Agriculture (MDA) on forms provided or approved by the MDA. After the 2010 crop season, an annual report is completed based on the fertilizer that is reported. This current report contains reported sales from the 2023 crop year which included all sales from July 1, 2022, to June 30, 2023. The reported table format is provided by The Fertilizer Institute¹.

The MDA collects tonnage² information on agricultural and non-agricultural fertilizers. The agricultural fertilizer sales are reported by tons of fertilizer product and the grade in a county by a licensed dealer. The non-agricultural fertilizers are reported by tons, but do not include the nutrient grade or county in which they were sold and are reported by the registrant. The nutrient analysis reported by fertilizer dealerships is for nitrogen (N), phosphorus (P), and potash (potassium) (K). It is important to note that phosphorus is reported as P₂O₅ and potash is reported as K₂O in the analysis. This report is based on agricultural fertilizer sales.

Sales and distribution of fertilizers in Minnesota do not necessarily reflect the amount of nutrients applied to crop land in any individual county. A farmer may have multiple fields that could span across county lines or even state lines. Farmers may also choose to purchase from a location in another county other than the

¹ Reports similar to this one from other states can be purchased from The Fertilizer Institute.

² Dealers report sales by pounds or gallons of product and those sales are converted to tons of product or tons of nutrients.

location of his fertilizer application. A dealer often records the sales of fertilizer based on the address of the farmer. Additionally, the farmer may purchase fertilizer in the 2022 crop year and apply that fertilizer for the 2023 crop.

Fertilizer sales were consistently around three million tons per year from 2012 to 2017. Since 2017, there has been a slow increase in reported fertilizer sales, with fluctuations of 200,000 to 400,000 tons per year. The peak crop year for fertilizer sales was in 2021 (greater than 3.45 million tons) closely followed by the 2023 crop year (just under 3.34 million tons). Dealerships are reporting increases of fertilizer products with lower amounts of nitrogen. This includes custom mixing of fertilizer products by the dealerships to meet the farmers nutrient needs.

Anhydrous ammonia sales have remained relatively flat since 2017 at approximately 150,000 tons of product. Before 2017, anhydrous ammonia sales were generally trending downward each year. Part of the downward trend before 2017 was the result of several dealerships shifting away from anhydrous ammonia and their farmers applying other sources of nitrogen, such as urea or other nitrogen products. In recent years, nitrogen products like ammonium nitrate are rarely sold, with only 5 tons sold since 2017. Dealers reporting products containing sulfur have increased in sales as ammonium sulfate sales have almost tripled since 2010.

Highlights of 2023 fertilizer sales include:

- Tons of Actual N sold were 852,448
- Tons of P_2O_5 sold were 341,986
- Tons of K_2O sold were 385,665
- Urea was the most popular product containing nitrogen with 925,407 tons reported sold
- A total of 260,355 tons of DAP and 242,328 tons of MAP were reported sold
- 12-40-0, a phosphorus product also containing sulfur, was the 3rd most popular phosphorus product sold in 2022 and 2023 with 135,251 tons reported for 2023
- Farmers are using more fertilizer products with lower nitrogen content specifically UAN solutions, such as 28-0-0 and 32-0-0, and nitrogen products containing sulfur like 24-0-0

Fertilizer sales trends have shown a general long-term increase year over year. The largest increase in fertilizer product sales have been for products containing sulfur. However, this report does not include an analysis of actual sulfur sold in Minnesota.

Dealers may report fertilizer sales in actual product, such as urea or anhydrous ammonia, or, as a custom blend reported as by grade, meaning fertilizer analysis. In 2019 and 2020 there was an increase in sales reported as custom blends over previous years. In 2021, reported custom blends were lower at around 93,000 tons. Custom blend reported sales fell again 2022 to approximately 71,000 tons followed by 75,000 in 2023.

Custom blends are reported as Code 0, identified by grade. Increases in the custom blends category will influence products that are used to make custom blends. An example would be a custom blend that is made from urea and monoammonium phosphate. The custom blend would reduce the amount of those products reported because the tonnage would be reported by grade and not as urea or monoammonium phosphate. A

reduction trend for actual products is due to those products which were used in custom blends and were reported as identified by grade.

Introduction

This report summarizes the tonnage of fertilizer reported from licensed dealers as distributed OR sold in Minnesota³ between July 1, 2022, and June 30, 2023 (the 2023 crop year).

Fertilizer tonnages are reported for agricultural or non-agricultural use:

- Agricultural fertilizer tonnages are reported as the amount and grade of fertilizer material sold to end users broken down by county where the fertilizer was applied. The tonnages are reported by fertilizer dealers or distributors.
- Non-agricultural fertilizer tonnages, such as lawn and garden fertilizers, are reported by the companies who produce or blend the product. These tonnages are reported statewide (not by county) and are not listed by analysis or type of fertilizer. Thus, the nutrient contributions from those fertilizers or distribution by county are not known.

Each registrant under Minnesota statute section 18C.411 and each company licensed under Minnesota statute section 18C.415 must file an annual tonnage report for the previous year ending June 30 with the Minnesota Department of Agriculture (MDA). Forms provided by or approved by the MDA, stating the number of net tons of each brand or grade of fertilizer distributed in Minnesota or the number of net tons and grade of each raw fertilizer material sold or distributed in Minnesota during the reporting period are used for reporting (Minnesota Statute 18C.421).

Units

- Tonnages are reported as short tons with one ton equaling 2,000 pounds.
- Nitrogen (N) is reported in units of N throughout the report.
- Phosphorus (P) is reported as P_2O_5 equivalent throughout this report. Conversion to elemental P can be accomplished as $P_2O_5 \times 0.437 = P$. Phosphorus (P) is reported in units of P_2O_5 throughout the report and a unit is equivalent to a pound.
- Potash (potassium) (K) is reported as K_2O equivalent throughout this report. Conversion to elemental K can be accomplished as $K_2O \times 0.830 = K$. Potash (potassium) (K) is reported in units of K_2O throughout the report and a unit is equivalent to a pound.
- Fertilizer sales are reported as liquid or solid, which is reported as bulk. Bag is no longer used for reporting fertilizer sales, but it still is listed in the output and thus in the reports. All fertilizer sold in bag is reported as bulk.

Data interpretation

Prior to using the information contained in this report, please note the following:

³ Fertilizer can be reported as distributed or sold. Fertilizer can be purchased in one county and applied in another county. Therefore, it is not sold, but distributed in that county.

- Prior to 2010, fertilizer sales were gathered from fertilizer distributors for a fall report and a spring report. The fall report consisted of sales from July 1 to December 31. The spring sales consisted of sales from January 1 to June 30. Readers are cautioned that the reported tonnages prior to 2010 is likely to underrepresent actual sales and may include substantial uncertainty. From 2010 to present, fertilizer sales are reported by dealers on a yearly basis from July 1 to June 30. This report consists of sales from July 1, 2022, to June 30, 2023, or the 2023 crop year.
- This report does not capture all fertilizer applied for the 2023 crop year. As an example, some Minnesota corn farmers apply nitrogen on corn fields for the 2023 crop after July 1. The sales after July 1 would be recorded in the 2024 fertilizer sales report. Similarly, some fertilizer sales reported may have been applied in the 2022 crop year.
- Fertilizer sold during a given year does not necessarily mean that the materials were “used” or land applied during that time period. On-farm storage continues to increase each year. This allows producers to purchase and store fertilizer products for future use when fertilizer products are readily available and/or at reasonable prices.
- This fertilizer tonnage report compares and charts sales from 2010 through 2023, the period when dealerships reported sales directly to the Minnesota Department of Agriculture. Readers are welcome to visit [Fertilizer Use and Sales Data](http://www.mda.state.mn.us/pesticide-fertilizer/fertilizer-use-sales-data) (www.mda.state.mn.us/pesticide-fertilizer/fertilizer-use-sales-data) to read previous fertilizer tonnage reports that chart sales data from 2010 and forward.

Readers are also cautioned that sales information may not accurately reflect fertilizer use in a specific county. The accuracy of the county sales information is influenced by the location of the dealership and the location of the purchaser. If the farm is near a county boundary or straddles county lines, the seller may be reporting sales data based on farm location or even the dealership location. Some farming operations have fields scattered across multiple counties, but the dealership may not know all the details necessary to accurately report on a county level. For example, in this report, Wabasha County reported annual sales of 29,134.54 tons of fertilizer sold and 162,193 acres of cropland⁴. Neighboring Winona County reported about 35% larger annual sales of fertilizer, 39,295.74 tons sold, despite having a similar amount of cropland, 194,480 (about 20% larger area than Wabasha). The 32,287 additional acres in Winona would not justify the differences in fertilizer sales. This large discrepancy is likely due to county sales not representing the county where the fertilizer was applied. Clustering the data by region removes some of the bias and, the data becomes even more accurate when data is presented as statewide data.

Selected sale and distribution data and trends are graphed in the following charts.

⁴ The most recent data for cropland acres by county is from the 2022 Census of Agriculture, USDA NASS

From 2010 to 2017, annual fertilizer tonnage reported has consistently been approximately 3 million tons. Fertilizer tonnage sales increased from 2018 to 2021 to roughly 3.2 million tons. Sales decreased to approximately 3 million tons sold in 2022 then grew to about 3.3 million tons of fertilizer sold in 2023. Figure 1 includes both agricultural and non-agricultural fertilizer sales.

Figure 1. Tons of fertilizer material reported sold in Minnesota by year from 2010 to 2023

From 2010 to 2020, nitrogen fertilizer sales had been relatively consistent at around 771,000 tons per year. Agricultural nitrogen sales increased to approximately 839,000 tons in 2021 but quickly dropped to approximately 756,000 tons in 2022. However, 2023 agricultural nitrogen sales raised by nearly 100,000 tons to about 852,000 tons of actual N (Figure 2).

Figure 2. Actual nitrogen sold in tons by year from 2010 to 2023

Fertilizer sales of available (units) for P_2O_5 and K_2O have begun to trend upward over time, however there are natural swings in yearly sales. Like agricultural nitrogen in 2022, P_2O_5 and K_2O sales also declined (Figure 2). Tonnage sales of P_2O_5 were approximately 342,000 tons and K_2O tonnage sales were approximately 386,000 tons in the 2023 crop year, which increased from the year before.

Figure 3. Actual P_2O_5 and K_2O reported sold in tons by year from 2010 to 2023

Anhydrous ammonia, as a nitrogen fertilizer source, was decreasing in sales until 2019. Sales of anhydrous ammonia slightly increased during the 2020 and 2021 crop years but remain below tonnages sold from 2010 to 2016. N solutions, such as 28-0-0 and 32-0-0 have almost doubled from 2010 to 2021. Sales of other sources of nitrogen and urea have increased in sales by approximately 40 percent from 2010 to 2017 and remained consistent from 2018 to the 2021 crop years. Sales of different nitrogen fertilizers vary from year to year as shown in Figure 4. Urea and other sources of nitrogen fertilizer decreased in 2022; however, all sources except anhydrous ammonia increased in sales during the 2023 crop year. Sales of different nitrogen fertilizers vary from year to year as shown in Figure 4.

Figure 4. Distribution of nitrogen sales by year for different nitrogen sources

Ammonium nitrate fertilizer, while more commonly used in the past, is rarely sold in Minnesota. One ton of ammonium nitrate was reported in 2022 and four tons were reported in 2023. Sales of ammonium nitrate have trended downwards since 2010 (Figure 5).

Figure 5. Ammonium Nitrate sales expressed as total tons of product sold from 2010 - 2023 in Minnesota

Sales of fertilizer containing sulfur (N-P-K-S) have increased from 2010 to 2021. Ammonium sulfate (21-0-0-24) sales have tripled since 2010. The sale of 12-40-0-10 and 13-33-0-15, private label brands, tripled from 2010 to 2013, and had remained consistent at 110,000 tons from 2014 to 2020 with a slight increase in tonnage sold in 2021. A slight decline in sales then followed in 2022 with sales slightly surpassing that of 2021. Thiosulfate (12-0-0-26) sales have more than tripled since 2010. Potassium sulfate (0-0-50-17) and potassium manganese sulfate (0-0-22-21) have remained relatively stable. Elemental sulfur and fertilizers without N-P-K that contained sulfur were not included in the following figure. The MDA only records fertilizer analysis of products for N-P-K. Therefore, sulfur is known only in products which include N-P-K in the analysis, such as those products below. A considerable amount of sulfur may also be in custom blends and was not included in the analysis. Despite the decline of sulfur-containing major fertilizer sales in 2022, sales returned to levels like 2021 in the 2023 crop year.

Figure 6. Major fertilizers containing sulfur expressed as total tons of product by year from 2010 to 2023

Fertilizer can be reported to the MDA by product or grade. Grade is reported separately and can include multiple products within the grade. For instance, some dealers report variable rate applications by grade sold to a farmer and could include urea, potash, monoammonium phosphate, ammonium sulfate and other dry fertilizers. Reporting by grade would mean that those products within the grade would not be reported by the specific product and therefore the product would be under reported. Fertilizer sales reported by grade fluctuate greatly from year to year and is dependent on how the dealer reports sales. Figure 7 details the sales of fertilizers that was reported by grade from 2010 to 2023.

Figure 7. Fertilizer sold by grade from 2010 to 2023

The fertilizer products containing phosphorus (P_2O_5) have increased overall with about 314,000 tons sold in Minnesota for the 2022 crop year. All sources of P_2O_5 declined in the 2022 crop year from record sales in 2021. Phosphate sales from monoammonium phosphate (MAP) decreased by around 50,000 tons to 117,000 tons for 2022. All sales of fertilizer sources of phosphate increased for the 2023 crop year.

Figure 7. Sources of P_2O_5 by year 2010 to 2023

Specialty fertilizers sold are reported to the Minnesota Department of Agriculture. Specialty fertilizer products are sold to the non-agricultural sector, such as greenhouses, nurseries, home gardens, house plants, lawn fertilizer, shrubs, golf courses, municipal parks, and cemeteries. Figure 8 summarizes the sales of non-agricultural fertilizer from 2010 to 2023. Specialty fertilizer sales are reported in the same time frame as agricultural fertilizers, from July 1, 2022 to June 30, 2023.
