

# BEST MANAGEMENT PRACTICES FOR ACETOCHLOR

**Protect water quality by following  
Minnesota Department of Agriculture voluntary  
BMPs (Best Management Practices) for acetochlor products:**

## General water quality BMPs:

Use proper rate  
for soil and organic  
matter

Consider reduced  
rates where  
appropriate and  
as indicated on  
product label

## Surface water BMPs:

Install filter strips

Adopt conservation  
tillage

Incorporate herbicide  
(if tillage is used)

## Groundwater BMPs:

Determine depth to  
groundwater

Manage irrigation  
(where applicable)

Voluntary BMPs for acetochlor and other corn herbicides were developed in 2004.
